

# Life Sciences Teacher

Senior and FET Phase | Grades 7 to 12

Broadacres Academy is an independent ISASA school in the greater Fourways area of Johannesburg, running from Preschool through to a National Senior Certificate written under the IEB. Our High School occupies a contemporary campus in Chartwell, three kilometres from the Preschool and Preparatory campuses, with light-filled classrooms opening onto Communal Learning Areas, indoors and out.

## THE POST

You will teach Natural Sciences in the Senior Phase, Grades 7 to 9, and Life Sciences in the FET Phase, Grades 10 to 12, taking students through to the IEB National Senior Certificate. The post carries a full teaching load across both phases, with responsibility for planning, practical work, assessment and moderation in line with IEB requirements.

## LEARNING, NATURALLY

The school was founded on a simple idea: children should not lose their love of learning as they move up through the grades. Learning is treated here as a journey of exploration and a collaboration between student and teacher — led by curiosity, guided by professional judgement, and paced to the natural development of each child. The curriculum, the buildings and the grounds are all designed around that idea.

## WHAT WE ARE LOOKING FOR

- A relevant degree with a recognised teaching qualification
- SACE registration
- Experience teaching Life Sciences to FET level; IEB experience preferable
- Confident practical and laboratory teaching, including the assessment of investigations
- A willingness to contribute to our co-curricular programme

Appointment is subject to reference and criminal background checks.
